

Water Levels in Hydro Tasmania Dams

Mr SHELTON question to MINISTER for ENERGY and RENEWABLES

My question is on behalf of my constituents regarding the water levels in our hydro dams. My constituent has noticed dam levels have seemed very full recently and I'm aware that Hydro Tasmania recently announced it entered this financial year with the highest storage levels in over a decade. Minister, my constituent would like to know how storage levels are measured and what systems are in place to ensure we don't run out of water during dry periods.
