Forestry Tasmania – History of Prescribed Burns on LISTmap

Mr BAYLEY question to MINISTER for ENVIRONMENT and CLIMATE CHANGE

My question is from a neighbour, Paul. Paul's been trying to find more information on Forestry Tasmania's history of planned burns using LISTmap. However, he has noticed that the fire history layer on the LIST does not seem to be accurate. When comparing the number and total of burns reported in Forestry Tasmania's annual reports, Paul found that the LISTmap fire history layer only showed 26 burns attributed to Forestry Tasmania from 2023, whereas the agency reports conducting 297 regeneration burns over the same period. Where can Paul find accurate data on Forestry Tasmania's record of planned burns in coupes? Why is the information from this agency seemingly withheld from the public fire history layer on the list?
